- HOSPITALITY AND OFFICES

NEW BOCCONI CAMPUS

Location

Milan, Italy

Client

Società Campus Bocconi a r.l.

Contractor

Impresa Percassi SPA

Scope of work

Design, fabrication and installation of steel structures

Period of execution

2018-2019

Weight

870 tons

The new campus of the Bocconi University is designed by the internationally renowned Japanese architect firm SANAA. The building is located in the former area of the Milk's Central Station of Milan, covering a surface of 36,000 square meters and representing an architectonic option in harmony with the existing structures.

The project involves the construction of four distinct buildings – an accommodation building, a new MEO office (Masters, Executive, Office) and a multifunctional center named REC, whose supporting structure of the three floors is made of steel pipes for vertical structures and truss beams. The building has an Olympic-size swimming pool on the ground floor, a gym on the first floor and a basketball court on the second floor: a special feature of the project is the athletics track, suspended above the basketball court, through 74 hangers supported on the

roof trusses. The design is characterized by the attention to environmental sustainability and energy saving. Each structure is set on a reduced central body, to guarantee exposure to light to the interior spaces.
